Applied Mathematics student with a dual background in Mathematics and Physics and advanced training in high-dimensional statistics, machine learning, and scientific computing. Experience modelling biomedical and time-series data and designing data workflows for a European pharmacy technology provider. Interested in applying quantitative methods to longitudinal health data, human biology, and drug discovery.

EDUCATION

Sorbonne University Master 1 in Applied Mathematics - Advanced Data Science Track Advanced Probability · Computational Statistics and Machine Learning · Advanced High-Dimensional Statistics · Foundations of Data Analysis · Optimization · Functional Analysis · C++	2025-2026
Sorbonne University Dual Bachelor's Degree in Mathematics and Physics	2022-2025

RESEARCH AND APPLIED EXPERIENCE

Founder Wots AI • Designed AI and data architectures for organizations working with complex and sensitive data. • Led technical scoping for a European pharmacy technology provider, defining data ingestion, canonicalization, anonymization, and evaluation workflows for an AI assistant platform. • Translated operational requirements into data pipelines, prototypes, and structured validation plans.	May 2025-Present
Research Intern Meudon Observatory • Developed numerical N-body simulations in Python and analyzed their consistency with observational data.	Summer 2023
Freelance Data Analyst Independent • Cleaned and explored datasets, developed statistical models, and automated analytical workflows in Python.	May 2025-Sept. 2025

SELECTED PROJECTS

Predictive Modelling of Medical Data Python · Scikit-learn · XGBoost Analyzed clinical and lifestyle factors associated with preterm-birth risk; performed preprocessing, feature engineering, classification, and model comparison using cross-validation.	
Medical Imaging Anomaly Detection PatchCore · Autoencoders · Evaluation design Designed a normal-only anomaly-detection framework and an evaluation protocol covering image-, pixel-, and anomaly-level performance metrics.	
Time-Series Modelling and Forecasting Python · Scikit-learn · Matplotlib · C++ Developed regression models for financial time series, including feature construction and comparative performance analysis.	

TECHNICAL SKILLS

Programming	Python · NumPy · Pandas · Scikit-learn · XGBoost · TensorFlow/Keras · C++ · SQL · Git · Jupyter
Statistics and ML	Regression · Classification · Time series · High-dimensional data · Feature engineering · Cross-validation · Model evaluation
Scientific Computing	Numerical simulation · Optimization · Statistical modelling · Data preprocessing · Exploratory analysis · Visualization

ADDITIONAL INFORMATION

Languages	French - Fluent · English - Fluent · Russian - Native
Interests	Biomedical AI · Drug discovery · Quantitative research · Scientific computing
Sports	Brazilian Jiu-Jitsu · Volleyball · Tennis · Skiing · Chess
